Portal frame Overcasts

We have designed our portal frame overcasts with ease of installation and safety in mind. By using a larger RHS section in the panels we have eliminated the need to use roof and wall braces thereby reducing the risk to staff by having to access the roof of the structure to install the braces. Installation is also much easier and quicker simply lift the roof panels into place and drop the wall panels down and bolt in the predrilled holes.

This design is supplied in unrated, 2 PSI rated and 5 PSI rated and can be fitted with man access doors if required.

Airlocks can also be fitted to the overcasts if required.

Manufacturers of Mining Ventilation Equipment and more, since 1974.
