

# Unrated Machine Door STANDARD

We have designed our Machine doors with a sliding Man Access Door in one panel, the top and bottom legs are adjustable and the header beam is in one piece. They also have a rubber seal flap along the bottom with flat bar to seal and can also be drilled for automation if required.

Our Machine Doors are fabricated in quarters panels which make a neat package that reduces transport costs and fitting problems.

[For any further information or pricing please contact us.](#)

Two machine doors packed and ready for transport.
